

Overview

Technology is changing how you do business, from how you deliver your product, to the way you run your operations. And we're no exception: Technology is re-shaping the way that we as a firm do business, meaning that we're facing many of the same challenges right alongside our clients.

That's why we're able to offer ways to meet these challenges with a truly commercial approach – we see the law not as an obstacle to be overcome but as a framework upon which you can achieve your ambitions.

At the sharp end of Data Privacy regulation

Data has become a powerful commodity, adding real value to companies and providing an opportunity to do business better. But it's an area that can pose great risks to those not taking their obligations seriously. From the potential damage to your brand as a result of data breaches, to crippling fines from the regulator and private enforcement actions that might spell the end of the business altogether. Dealing with data in the right way is critical.

Our Data Privacy team deliver the complete spectrum of advice, from reviewing and assessing activities around collection, storage and use of data, employee privacy and data breaches, to advice on potential class actions arising from GDPR. With an unrivalled international presence, we deliver complex and large-scale cross-border data privacy projects for some of the world's largest companies.

Meeting the increasing demands of Cybersecurity

Alongside the rise in sophistication of data-related technology available, there's often a parallel increase in the sophistication of how that data can be stolen or exploited. At one end, ransom attacks that may only temporarily interrupt business, and at the other end, large-scale breaches of data that threaten much wider consequences for the economy and even society at large.

With the onus on companies to provide adequate protection for both customers and their own data and systems, ensuring compliance with regulations and having the right safeguards in place in case of an attack are essential. Our team offers you everything they need to remain as protected as possible. From making sure you stay in line with regulation and protect your data, to helping you respond and mitigate damage in the event of a cyberattack.
